ARCH MOBILITY IN PATRAS

We are thrilled to introduce our innovative project “ARCH: Bringing Cultural Heritage to the digital Era; Unifying Past, Present and Future”, which aims to engage and educate Primary Education students aged 9 to 12 through an exciting combination of a mobile application and a cultural heritage game.

At our first transnational meeting in Patras (Greece), our consortium made significant progress in developing the project's first and second outcomes: an interactive application and an engaging game centred on cultural heritage. These educational tools are being carefully designed to ignite children's curiosity, foster appreciation for cultural heritage, and provide a fun learning experience.

Our cutting-edge application serves as a gateway to an immersive world of cultural heritage. Through captivating visuals, informative content, and interactive activities, children will embark on a journey of discovery. They will have the opportunity to explore various cultural sites and engage with the rich tapestry of human heritage. Our application is not just educational; it also ensures an entertaining experience that keeps children captivated and eager to learn more.

In addition to the application, we are working on our cultural heritage game. This dynamic and interactive game invites children to answer questions related to cultural heritage in a fun way. By navigating different locations and historical periods and deepen their understanding of the fascinating world of cultural heritage. Our game tries to merge entertainment with education, making learning an enjoyable and rewarding experience.

In this project our mission is to inspire children to explore and appreciate cultural heritage, and we firmly believe that ARCH will achieve this goal. By combining the power of technology, interactive experiences, and educational content, we aim to ignite a lifelong passion for cultural heritage in young minds.
